

Crownable Adjustable Channel-lock Die

• **Die Crowning**

Crowning is achieved through a series of precision wedges providing a uniform crown.

• **Hardened Edges**

• **Tang Groove**

Moving the riser block to align the tang groove with the centre of the channel-lock die allows for placement of single tang dies while still providing crowning capability.

• **Digital Counter**

Rotating the handle on the manual holder adjusts the crown from the center out.

An LED counter displays the exact crown in thousandths of an inch.

NOTE: • THE ACCURPRESS BED CAP WIDTH MUST BE INCREASED TO ACCOMMODATE THE WIDTH OF THE ADJUSTABLE BASE.
 • THE 1" – 12" ADJUSTABLE DIE REQUIRES INCREASED THROAT DEPTH ON THE PRESS BRAKE.
